

Data and Code for “Distributive Implications of Governing Party Constituencies: Evidence from Bangladesh”

by Youjin Hahn, Kanti Nuzhat, Hee-Seung Yang, and Haishan Yuan

Economic Development & Cultural Change

Overview

The Stata do-files and data files in this replication package reproduce the analysis in the paper above.

Instructions to Replicators

- 1) Download the zipped replication folder and unzip it.
- 2) Set the unzipped folder as the working directory in Stata.
- 3) Run do-file “./code/master.do” in Stata to reproduce the tables and figures.

Computational Requirements

Software:

- Stata MP version 15 and the following Stata packages:
 - unique
 - estout
 - rdrobust
 - rddensity
 - reghdfe
 - scheme-burd

Hardware Requirements:

- 16 GB RAM
- 1 GB hard drive space

Runtime:

The master do-file `./code/run_replication.do` runs for about 4 - 6 hours on a laptop with a 12th Gen intel i7 CPU, 32 GB of RAM, >100 GB of free hard drive space, running Windows 11 operating system.

Do-Files:

The `./code/master.do` do-file calls the following do-files in the folder `code` to reproduce the tables and figures:

- `./code/election_outcomes.do`
 - This do-file plots the election outcomes during our sample period in Bangladesh.
- `./code/summ_stat.do`
 - This do-file provides summary statistics of the analysis sample.
- `./code/density_tests.do`
 - This do-file conducts RD density tests.
- `./code/RD_exp.do`
 - This do-file performs RD estimates and plots RD graphs where output variables are related to household expenditure.
- `./code/RD_poverty.do`
 - This do-file performs RD estimates and plots RD graphs where output variables are poverty rates.
- `./code/RD_public_goods.do`
 - This do-file performs RD estimates and plots RD graphs where output variables are publicly provided goods.
- `./code/qte.do`
 - This do-file estimates quantile treatment effects of having a government MP on household expenditure.
- `./code/land_ownership.do`
 - This do-file estimates heterogeneous treatment effects of having a government MP on household expenditure by landownership.
- `./code/mechanism.do`
 - This do-file conducts analysis related to the potential mechanisms.
- `./code/incumbency_adv.do`
 - This do-file analyzes the incumbency advantages using RDD

- `"/code/close_nonclose.do"`
 - This do-file carries out analysis for Section 6.3 Beyond Close Elections.

Data-Files:

The folder "data" includes the following data files for analysis:

- `election_outcomes.dta`
 - This data file includes information in vote shares and seat shares of major parties in the election during the sample period.
- `vmargin.dta`
 - This data file includes vote share margin in elections.
- `incumbency_adv.dta`
 - This data file is used for the analysis of incumbency advantage.
- `poverty.dta`
 - This data file includes poverty rates for the relevant RD analysis.
- `reg_hh.dta`
 - This data file includes household level data for analysis.
- `reg_ind.dta`
 - This data file includes individual level data for analysis.
